

Our project pipeline

Prioritising and executing our capital projects

Making sound capital allocation decisions to sustain and grow our business requires critical assessment of the availability, affordability and quality of these key inputs to our processes, operations and projects. This has allowed us to prioritise our capital expenditure on the growth opportunities that play to our strengths globally, and which, we believe, will unlock maximum value for our shareholders over the long term and will ensure sustainability.

*FEED: front-end engineering and design/EPC: engineering, procurement and construction
